30 June 2021

Clinic Name: **Walrus (Paed card OP) - ECH**  
Consultant: **THEOCHARIS**  
Clinic Date: **29 June 2021**

Dear Dr Birch

Re: **GABRIEL GRICIUTE** SILVA  
Hospital No: **8009144B**  
Address: [REDACTED]

Date of Birth: **14-05-2021**  
NHS No: [REDACTED]

**Diagnoses:**

1. Left ventricular fibroma

**Medications:**

1. Atenolol 1.2 mg once a day
2. Furosemide and spironolactone twice a day

It was a pleasure to see Gabriel in the out-patient clinic today. He was brought here by his mother. Since the last time that we saw him, he had a 24-hour tape which showed a short run of VT, about nine beats. Therefore his atenolol was increased. At home he has been asymptomatic, feeding and growing and mum is really happy with his progress, however she wants to the NG tube to be removed.

He is currently recovering from an upper respiratory viral tract infection which has caused him to have a blocked nose.

His weight today was 5.5 kg and his height was 58 cm. His blood pressure on his right arm was 109/90 mmHg with a heart rate of 135 beats per minute. He was fully saturated in room air.

On examination today he was pink and well perfused, slightly snuffly, however everything else was normal.

His ECG was in sinus rhythm with a heart rate of 136 beats per minute, PR was about 140 milliseconds. There were no ectopics or VT runs.
