Date of Birth: 14/05/2021
Age: 44w 5d
Address: [REDACTED]

Subject: **Discharge Summary Letter**
Date: **23 March 2022**

Dear Infant Gabriel Silva and/or carer,

This is your discharge letter which contains a summary of your stay in hospital.

You were admitted to Sky Cardiology ward on 22 Mar 2022 (11:00 AM) under the care of Dr. S Mathur. The reason for your admission was: Sedated CT.

During your hospital stay, the following problems were addressed:

- Left ventricular fibroma (this was the main problem)

You had the following procedure(s) during this hospital stay:

- Sedated CT Scan

This is a medical summary of your admission:

Admission for sedated CT, Patient under Dr Dr Paraskevi Theocharis

Diagnoses:

1. Left ventricular fibroma
2. Episodes of ventricular tachycardia

Gabriel has been keeping well. He had a viral infection a few weeks ago but that has resolved. He did not require any admission or presentation to ED.

He was admitted to Sky ward today for sedated CT. He had a cannula inserted for CT. Unfortunately on the first occasion the cannula and sedation failed meaning Gabriel had to stay another night. The following day the CT was completed successfully.

Following CT he will be observed on the ward and if his observations are stable and no other concerns he will be discharged following review. Mother informed that they were running low on his regular medication which has been requested.

The following list is a plan to support your ongoing health:

Safety net advice. Routine observations post sedation prior to discharge.

This is our record of your allergies and adverse reactions:
